

DIESEL SPILLS KILL

www.KillSpills.org.uk

The Road Users Campaign to Kill diesel Spills - TRUCKS

Diesel deposited on the road represents a **MAJOR HAZARD** to motorcyclists!

Diesel is as slippery as **BLACK ICE** but found all year round!

Motorcyclists are more likely to **SKID ON DIESEL**, than ice or snow!

Motorcyclists **DIE** unnecessarily every year as a direct result of diesel spills.

We need your help, as a lorry driver, you can help make the road a safer place for all road users and especially motorcyclists. If you overfill your diesel tank, or forget to fit the filler cap, or don't fit it properly, diesel can spew from your tank as you negotiate bends, roundabouts and junctions. Diesel on the road can be a death trap, not only for motorcyclists, but for other road users as well.

NEXT TIME YOU FILL UP REMEMBER:

- 1: **DON'T** overfill your tank by "Necking it"
- 2: **DO** re fit your filler cap correctly.

By carrying out these two simple tasks, you will save lives.
